-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4, 5, 7, 8, 10, 11, 13, 14, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsai (US 5,883,727).

Art Unit: 2878

With respect to claims 1, 2, 4, 5, 10, 11, 13 and 14, Tsai discloses in Figs. 11 and 16 an image scanning apparatus with a light source (50), a housing, a lens (11) within the housing, a photosensor (CCD - 30) installed on a first side of the lens (left of the lens), a plurality of reflectors (mirrors) installed on a second side of the lens (right of the lens) that forms a linear optical path to the photosensor, and there is no reflector on the first side of the lens. Figs. 11 and 16 further illustrates the linear optical path passes between two reflectors closest to the lens and travels through the lens to the photosensor. Although Tsai fails to expressly disclose the lens focuses the light, Tsai does disclose the lens moves when the resolution changes, thus by the fact that the lens moves, it would have to focus the light onto the photosensor.

With respect to claims 7, 8, 16 and 17, Figs. 11 and 16 illustrate four reflectors (mirrors), thus three reflectors are included.

Claims 1, 4, 5, 7-10, 13, 14 and 16-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Lan (US 6,762,861).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

With respect to claims 1, 4, 5, 10, 13 and 14, Lan discloses in Fig. 5, a scanner module comprising a housing, light source (52), a lens (56) that focuses light installed inside the housing, a photosensor (CCD - 58) installed on a first side of the lens wherein the photosensor converts light outputted from the lens into digital signals, and a plurality of reflectors (mirrors – 53, 54) installed on a second side of the lens (i.e. left side of the lens) which reflects light inputted into the scanner module to form a linear optical path in order to guide light to the photosensor via the lens and no reflector is installed on the first side of the lens (i.e. to the right side of the lens).

With respect to claims 7-9 and 16-18, Fig. 5 further illustrates the scanning module comprising five mirrors (reflectors), thus the module inherently comprises of three and four mirrors.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 6, 9, 12, 15 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsai.

With respect to claim 3 and 12, Tsai addresses all the limitations of claims 1 and 10, however fails to expressly disclose the two reflectors closest to the lens are capable

Art Unit: 2878

of partially covering an edge ring of the lens but not a main part of the lens for allowing light to focus on the photosensor via the lens. It would have been an obvious design choice to place two reflectors closest to the lens to partially cover an edge ring of the lens in order to make the system more compact.

With respect to claims 6 and 15, Tsai addresses all the limitations of claims 1 and 10, however fails to expressly disclose the photosensor being a CMOS. However, it would have been obvious to make the photosensor a CMOS since CMOS sensors are easier to produce and are more cost effective than CCDs.

With respect to claims 9 and 11, Tsai addresses all the limitations of claims 1 and 10, however fails to expressly disclose the inclusion of five reflectors. It would have been an obvious design choice to include any number of reflectors that are needed to ensure proper imaging on the detector and to make the system more compact.

Claims 6 and 15 are rejected under 35 U.S.C. 103(a) as being obvious over Lan.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR

1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(I)(1) and § 706.02(I)(2).

With respect to claims 6 and 15, Lan addresses all the limitations of claims 1 and 10, however fails to expressly disclose the photosensor being a CMOS. However, it would have been an obvious design choice to make the photosensor a CMOS since CMOS sensors are easier to produce and are more cost effective than CCDs.

Telephone/Fax Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suez Ellis whose telephone number is 571-272-2868. The examiner can normally be reached on 8:30am-5pm (Monday-Friday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Porta can be reached on 571-272-2444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2878

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
